

# Transfer Factor Plus™

We live in a world that is in a health crisis. Several mutated strains of bacteria cannot be killed with our best antibiotics. Patients are dying from strep throat, staph infections, and even measles. Tuberculosis is making a comeback. Recently, several individuals died from drinking water contaminated with the E-coli bacteria. **Last year 180,000 people died from infectious diseases.** Medical professionals are warning that a global catastrophe is right around the corner. They predict that 50 million people will die from an impending epidemic. Each year, more than 2 million people are diagnosed with cancer or heart disease. The incidence of diabetes is rapidly increasing. Auto-immune diseases, such as rheumatoid arthritis, Lupus, MS, and allergies, are on the rise. **The question is what can we do to protect our loved ones?**

Many scientists agree that our **immune system is the greatest possible defense against disease.** Our immune system is more complex than antibiotics or other types of medicines. When we become ill, it is generally because our immune system has failed. Our immune systems have been weakened by pollution, chemicals, stress, poor diet, bombardment by electromagnetic forces, and many other factors that we face daily. For thousands of years, humans have tried to stay clear of germs. Due to a lack of consistent exposure, our immune systems have grown "dumb." There has been a major breakthrough in nutritional research. **After more than four decades of research, the long sought after transfer factor has been isolated and extracted for health purposes.** Hundreds of research projects and clinical studies have produced a bioactive form of transfer factor. 4Life™ Research has the patent rights to Transfer Factor™ and several patents on a product called Transfer Factor Plus™. Transfer Factor™ is not a vitamin, mineral, herb, phytonutrient, drug, or enzyme; **it is a totally new scientific breakthrough.**

Transfer factors do not cure disease or kill germs. Our immune system protects us from germs, cancer and disease. Transfer factors modulate and educate the immune system. They can boost, strengthen, or suppress the immune system (in the case of autoimmune disease), but they go far beyond these effects. **According to renowned medical specialists, such as Duane Townsend, MD, Rob Robertson, MD, and William Hennen, Ph.D., transfer factor is the most significant breakthrough in the health care industry in this century.**

During my 33+ years as a successful networker and nutritional enthusiast, **I have never been more impressed with a nutrient** as I have been with Transfer Factor™. For three decades, I have researched nutritional breakthroughs. Nutrition has saved my life, as well as impacted the lives of hundreds of personal friends and acquaintances. I founded a **nutritional therapy program** through which I furnish healthcare and innovative nutrition to individuals who are either seriously ill, terminally ill or suffer from degenerative illnesses. The condition of these individuals keeps them from responding to the "**placebo**" syndrome. It is a scientific fact that up to 25% of all perceived results are psychologically induced and are only temporary. I receive regular reports from the caregivers on all blood work and from their observations of the patients. **I have been amazed at the impact that Transfer Factor™ and Transfer Factor Plus™ has had on these individuals.**

One of these patients has suffered from Huntington's Corea for more than 17 years. **Huntington's Corea** is a degenerative disease for which there is no cure. The brain cells completely die in these patients, and various body functions shut down throughout the course of the disease, including the immune system. As the brain dies, secondary illnesses set in, which generally are the actual causes of death. We cared for her sister and father until they died, giving us a basis of what to expect with Cynthia. Also, we have observed the process of the disease in more than a dozen relatives in this area. Cynthia has lived longer with the disease than her father, sister, or any of her relatives. Cynthia has been on Transfer Factor™ since April of 1998. **The difference has been amazing!** We have taken her off Transfer Factor™ for short periods to observe any differences. When she does not consume Transfer Factor™, she becomes ill with infections ranging from irritable bowl syndrome to pneumonia.

Ann Lane was diagnosed with Hodgkin's cancer. The tumor mass filled her rib cage. **Her immune system dropped into the 2,000 range.** She began her chemotherapy regimen. We placed her on a nutritional protocol along with the traditional therapies administered by her physician. **Ann's blood work revealed that 30 days after beginning her nutrition protocol, her immune system went up to and maintained a level ranging between 4,200 and 7,200.** Early in her treatment, her lungs were damaged by the chemotherapy. She had to stop treatment for approximately one month before beginning her radiation therapy. During this period the tumors continued to shrink. **Ann believes that the nutrition, especially Transfer Factor™, boosted her immune system and made the difference, possibly saving her life.\***

David Markowitz, MD, a pediatrician with a patient base of 4500 children, is conducting an ongoing retrospective study of patients who are consuming Transfer Factor™. **The children range from six months to nine years old. The children taking Transfer Factor™ have experienced 74% less illness and have used 84% less antibiotics.\*** Thousands of testimonies have reinforced these results. In my 33+ years in this industry, I have never seen a nutrient enter the market

with so much science, clinical studies, and research supporting its effectiveness as does Transfer Factor™. Presently, **clinical studies are being conducted all over the world with transfer factors.** You don't have to wait for years until this product is navigated through the media and medical society. You can experience this cutting edge science now!

The research behind transfer factor began in 1949, when Dr. H. Sherwood Lawrence made a revolutionary discovery. While studying tuberculosis, he found that there was a factor in the blood that transferred immunity from the donor to the blood recipient. This discovery launched a relentless pursuit of what was in the blood that could transfer the strength of one person's immunity to another individual. **Throughout the past few decades, as technology has improved, the secrets of these miraculous molecules have been gradually revealed.**

Transfer factors are small peptides, composed of 40 amino acids that store all of the experiences of the immune system. Transfer factors are the intelligence of the immune system. These peptides function much like the alphabet does. **These 40 peptides are arranged in sequence to "spell" or create a chemical picture of each virus, bacteria, fungi, or parasite.** This is how experienced information is stored in the transfer factors. Actually, transfer factor is a soup of billions of transfer factor molecules. They are vital in the immune system's development of strategies against disease and invading germs. This information is transferred to various "combat" cells within the immune system that will engage the "enemy." This process is vital in the battle against disease. **The battle against disease is a race between the immune cells and the invaders. If the germs win, you get sick or even die.** When the immune cells win the race, you stay well. Transfer factors educate your immune system about the germs before they invade your body, providing it with an advantage over the invaders.

Also, transfer factors contain inducers and suppressors that regulate the immune system's response to disease. The inducers are used by the "brain" transfer factors to activate more "combat" cells into battle against germs and disease. An independent test by Dr. Darryl See found that Transfer Factor™ could activate natural killer cells more than 100% more effectively than the body could without the boost. **Transfer Factor Plus™ increased the activity of natural killer cells by 248%. (Natural killer cells are your first line of defense against cancer, viruses, and bacteria.)** The suppressors are very important in maintaining your health. When germs enter the body or a mutated cell becomes cancerous, the transfer factor, which serves as the "brain" of the immune system, carefully guides the "combat" immune cells to the target and then activates the "combat" cells to destroy the target. After a successful battle, suppressor cells, through a biofeedback mechanism, remove the "combat" cells from the battle.

Sometimes immune cells overreact to an invader and destroy the battlefield, which is your body tissue. At times the immune system will actually target its own body as the enemy and attack it. This is called an auto-immune disorder. **The transfer factor suppressor molecules are important in regulating the immune system so that you will not develop auto-immune disorders.** There are hundreds of different auto-immune diseases. Many people don't even know that what they are suffering from is an auto-immune disease. Even allergies are a type of dysfunctional immune system that is attacking the wrong target.

Scientists have discovered that certain animals (mammals) contain an exact match of the human transfer factor. Animals that live in the "wild" are more exposed to a wider variety of germs and have **an immune system that is more powerful and effective.** Researchers have found a way to extract these transfer factors from the colostrum in first milk, meant to strengthen the newborn animal's immune system. Generally newborn animals that do not receive the mother's transfer factors die shortly after birth. When we consume these transfer factors, we receive the knowledge of the animal's powerful immune system. **We receive their inducers that allow our immune system to generate a powerful response to cancer and invaders.** Don't confuse transfer factor with colostrum supplements. An independent laboratory analysis has found that the transfer factor in colostrum is not bioactive. Transfer factor must be processed through a patented procedure to remain bio-active. We have the worldwide rights to this patented process. This is an exclusive patent and product.

The benefits of increasing the intelligence of the immune system go far beyond fighting germs. **Transfer factors have been under research for four decades, but only recently has technology advanced enough for science to investigate its full potential.** Now that a stabilized oral form is being marketed to the public, its far-reaching benefits are being discovered. As an example of the potential of what modulating and boosting the immune system may accomplish, consider a study of Alzheimer's disease that was published in the July 1999 Journal of Nature. A vaccine for Alzheimer's patients has been successfully tested on the mice model. This vaccine was found to remove plaque from the brains of the mice. It hasn't been proven in studies on human beings yet, but the indications are promising. The interesting fact is that the vaccine boosted the immune systems of the mice, and the immune system removed the plaque. Transfer Factor Plus™ is the greatest immune booster in the nutrition industry. Can you imagine what its full potential could be?!

Indirectly, highly educated transfer factor may affect other vital areas of the body, and some experts believe it may be the hottest anti-aging product on the market. There are several important body systems, such as the immune system, rejuvenation system, detoxification system, hormonal system, enzyme system, cellular energy system, and antioxidant system. All of these systems require nourishment, energy, and a host of other substances in order to maintain proper function. These systems are supplied on a priority basis. When the body is over worked because of stress, lack of proper

nutrition, toxins and other environmental factors, it will "short" less priority functions and focus its energies on the top priorities. The system that deals with the body's most acute needs will be given priority status. **Since the immune system is fighting for our immediate survival every minute of the day, it is one of the highest priority systems.**

To give you an idea how important the immune system is, think about this: **If you take a piece of meat and lay it on the table, it will spoil in a few hours.** What is spoiling all about? It is the increase of bacteria in the meat to a point that the meat is poisonous to us. **Without an immune system, the meat in your body would do the same thing.** Every minute of your life your body is dealing with billions of bacterium which are already in your body. If these bacteria get out of balance you develop yeast, vaginal, bladder, or other infections. **Your body is also under attack every minute from the outside. Germs and free radicals are constantly attacking the body. Everyday your immune system is destroying mutated cells within your body. If the immune system drops too low, you develop cancer or a host of other illnesses.**

Because of modern day stress, pollution and a number of other factors, all of us are working double time to survive. **Our bodies are robbing "building materials" from our other systems in order to survive. The immune system can even rob materials from your glands, organs, muscles, tendons, and bones. When you bring more intelligence into the immune system, it can do its job more efficiently, requiring less energy and maintenance materials from the rest of the body.** Transfer Factor allows the immune system to operate with less energy by being smarter and more strategic. This leaves more "materials" for the rejuvenation system, which directly affects the aging process.

**Even an individual who thinks he/she is healthy really needs this product.** Their immune system is working overtime to keep them healthy. The human immune system just isn't made to function well in this social environment. Our immune system is under stress that our forefathers didn't have to face. You never know when you may eat some extra pesticides on some fruit or vegetables. The FDA issued a warning awhile back stating that children under six years of age should be careful in consuming certain fruits because pesticide levels were too high. Excessive pesticide levels have been proven to cause cancer. You never know when you or your loved one may contact a mutated germ. **How many people do you know who may not be sick, but go around tired much of the time? Their immune systems may be overworked. Everyone needs this product!**

The biochemists at 4Life™ under the visionary leadership of David Lisonbee, have taken transfer factor to another level of science. **Researchers at 4Life™ Research have included six other elements of cutting edge science in Transfer Factor Plus™.** ThyRx™ is a proprietary thymus complex, which contains thymic factors to help support the function of T-cells. A proprietary blend of glyconutrients (IP6, Cordyceps, Maitake and Shiitake mushrooms, Beta Glucans, and mannans) add a powerful boost to the immune system's ability to produce natural killer cells and boost the actions of a cascade of immune "combat" cells. **There is absolutely no other product in network marketing that can affect the immune system like Transfer Factor Plus™,** and we have the research to prove it. Hundreds of astounding testimonies are flooding into our office on this revolutionary product. The science behind transfer factors is not just a network marketing creation. This science is a product of research taking place throughout the world. **We have the abstracts to prove it!**

4Life™ Research has a research and development department that is **staffed with some of the best minds in the scientific community.** They bring to our industry a full line of "breakthrough" **products.** If you would like to protect your loved ones with the best possible nutritional science, you have found the right place. If you would like to be a part of the process of spreading the word about a revolutionary breakthrough that could impact the lives of millions of people, you are at the right place at the right time. According to several physicians that I have spoken with, it is only a matter of time before millions of Americans are consuming transfer factors. There is no other product in this industry that even comes close to the performance of Transfer Factor Plus™. All other nutritional products have other nutritional products that can overlap their functions. No other nutrient in the world can bring active experience information into your immune system. This is the exclusive function of transfer factor. How would you like to achieve your financial dreams by actually saving lives and delivering thousands of people from suffering? That is what I sincerely believe and know in my heart that we are doing. Examine the testimonies of doctors, distributors, customers, and employees, and see what you think. **I invite you to join me in this crusade!**

\*This information has not been evaluated by the FDA or by 4Life™ Research. We do not claim that 4Life™ products directly prevent, or cure any disease. We do not suggest that anyone should replace traditional medical treatment with our products. 4Life™ products are promoted for their ability to enhance the effectiveness of our natural immune system functions. This document exposes you to many testimonies and nutritional ideas. We encourage you to use common sense and prudence in evaluating testimonies, research, and opinions. Testimonies can be based on "placebo effects," which basically means that you can experience temporary results just because you really believe you will. Translating research into real life situations can be complicated. Even medical doctors may disagree on certain subjects. It is our desire to expose you to many different ideas for your consideration. Our focus is on supporting the immune system, which can assist your body in the healing process. The testimonies and information in this document only represent the opinions of the individuals involved. We encourage you to use common sense in your expectations when consuming any nutritional product.
